

INTRODUCING FORT KNOX'S BALLISTIC PROTECTION - RAISING THE BAR ON SECURITY ... AGAIN

ARMAKNOX™

Your safe can be upgraded to a Level 3 rated ballistic safe.

Three times harder than regular steel, the heavy 7 gauge ArmaKnox AR 500 steel gives the safe the ability to withstand 3 shots from a .44 magnum pistol.

The ArmaKnox steel is placed on all 6 sides of the safe as well as in the door for complete ballistics coverage.

ArmaKnox has a unique combination of consistent and high hardness, high strength and excellent toughness. The properties are the result of an appropriate composition of the steel and an optimized manufacturing process. The high hardness of ArmaKnox steel is acquired thanks to heat treatment in a continuous process. ArmaKnox has three times the tensile strength of regular mild steel and by placing a heavy 7 gauge plate throughout your Fort Knox safe in addition to the existing steel in the safe, your safe is now virtually impenetrable.

A bullet proof safe? A safe more resistant to cutting, drilling or prolonged attack? More steel than any other safe on the market today and the only one that is ballistics rated. ArmaKnox and Fort Knox are now the only security standard you should strive for.

FORT KNOX LEVEL 3 BALLISTIC PROTECTION

Standard Steel:

ArmaKnox AR500

3 times tougher than regular steel
